

From left to right, top to down : Chips, turnkey system, QCL + electronics, HHL-package

Benefits:

- ITAR free technology
- QCW operating mode for increased wall-plug efficiency and reduced thermal dissipation
- Reproducible specs manufacturing for series productions

ITAR free MIR high-power quantum cascade laser systems

The PowerMir product line is high power pulsed Fabry Perot Quantum Cascade Lasers (QCL) based on high-performance proprietary technology and the lasers described in this datasheet emit around 4.6 microns of wavelength.

Proudly manufactured in France, mirSense lasers are ITAR free and have outstanding power and wall-plug efficiency performances. Customers can purchase different laser system configurations like plug-and-play benchtop turnkey systems, OEM driver + laser modules or just the HHL-packaged lasers.

Features

Maximum power ¹	>1W or < 500mW ²
Mode of operation	Quasi-CW, high duty cycled pulsed
Central wavelength ⁽³⁾	4.6 μm +/- 0.1 μm
Pulse frequency	> 500 kHz
Divergence for the lasers with standard beam ⁴	3 to 6 mrad (horizontal) 2 to 4 mrad (vertical)

1. The maximum power is the maximum average optical power

2. The power is given when the base plate temperature of the HHL-package is regulated at +20°C. < 500mW means that the average power will be between 450mW and 500mW. Under 500mW, the laser is not considered a dual use product and therefore no export control applies. The laser's specified output power is the sum over the full spectral bandwidth.

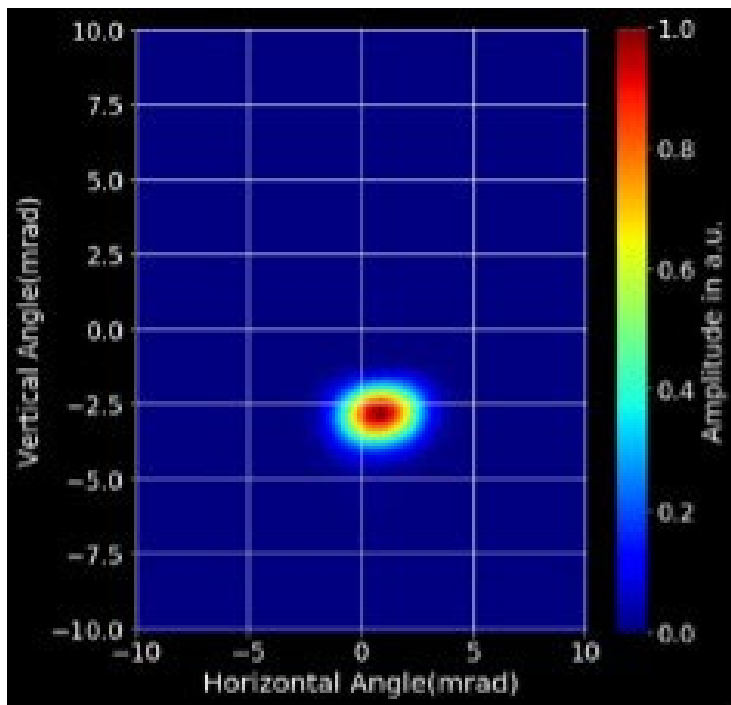

3. The central wavelength is defined as the optical power weighted average of the wavelength.

4. The shape of the beam is slightly elliptical

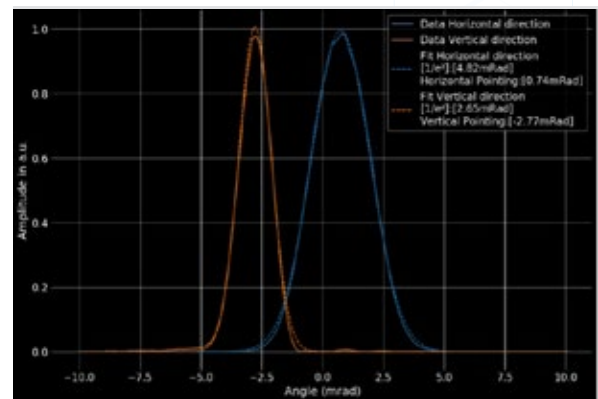

Beam quality	TM00 Gaussian beam, $M^2 < 1.5$
Output beam dimension for the standard beam option (window output)	Typically 3 mm (vertical) x 2 mm (horizontal)
Polarization	Linear vertically polarized (>98%)
Reliability	> 3500 h

Typical Beam quality

The picture shows the 2D mapping of the laser far field taken in intensity scale.

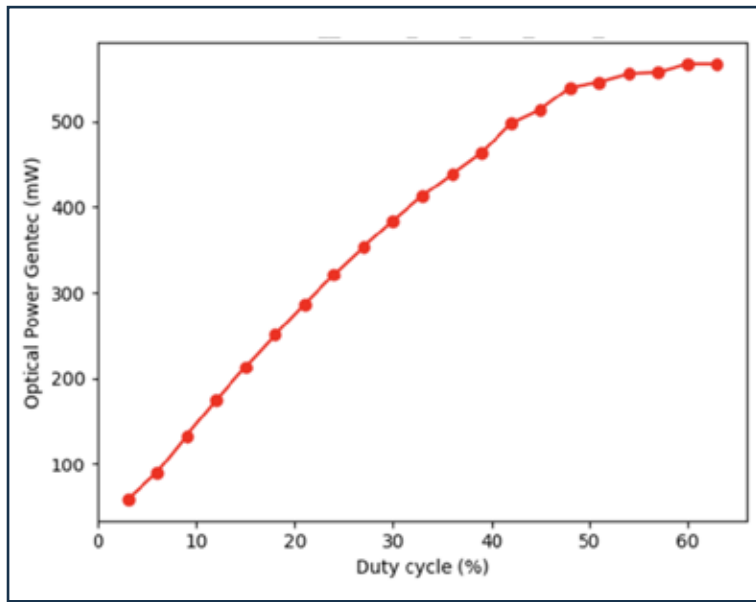

Standard laser beam

Laser beam at 4.6 microns

Average optical power

Average optical power of the laser as a function of the laser duty cycle with a pulsewidth of 300ns and a laser temperature of +20 °C

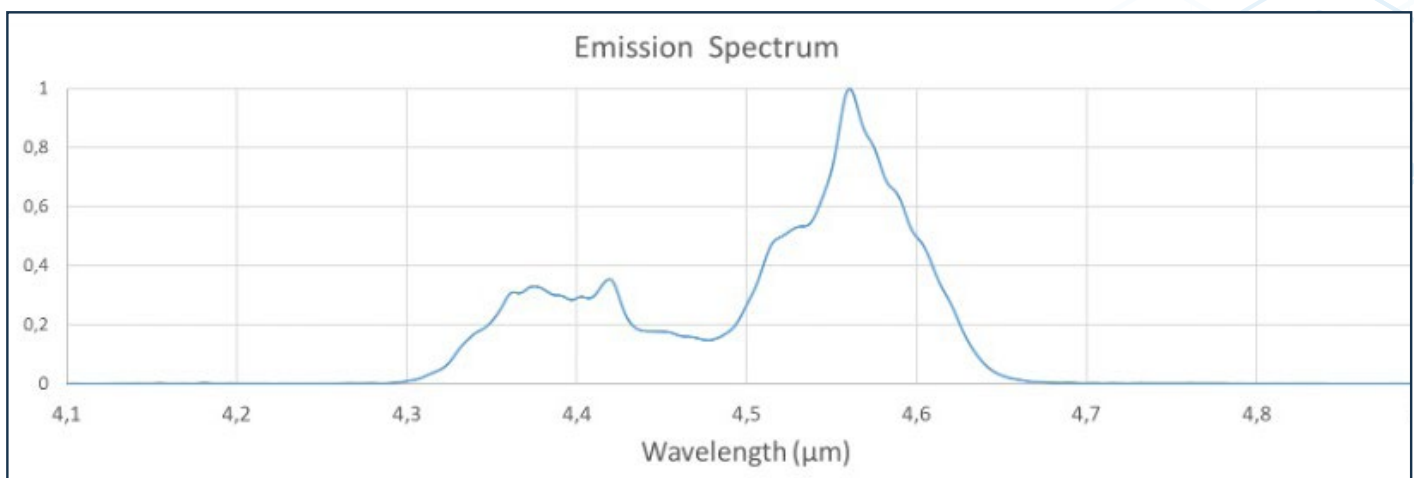

500mW laser

> 1W laser

Typical spectrum

4.6 μ m

SYSTEM CONFIGURATIONS

Customers can purchase different laser systems depending on their needs

For customers who want to purchase just the laser, mirSense provides **HHL-packaged lasers** with a built-in TEC and thermistor to control the chip temperature and a collimating lens inside the package. These lasers are burned-in during the manufacturing process to guarantee power and wavelength stability over time and the packages are hermetically sealed with dry N2 air inside.

For clients who want to integrate the laser in a product, mirSense provides an **OEM module** controllable by Modbus or Windows Software and made of a PCB driver connected to a HHL-packaged laser. The driver takes care of temperature and current control, laser safety and modulation is possible, both external with a TTL signal or with a Windows software.

For lab development purposes, mirSense provides a **plug-and-play benchtop turnkey system** that takes care of everything like temperature and current control, air cooling and laser safety and comes with a user friendly Windows software to operate the laser and modulate its power (external TTL modulation being also possible). The turnkey system can control two laser heads at the same time and can be fitted with red beam alignment lasers to make alignment easier in the lab.

	HHL package	OEM module	Turnkey system
Collimating lens inside the package	✓	✓	✓
Built-in thermistor and thermoelectric cooler (TEC) inside the package	✓	✓	✓
Sealed atmosphere package	✓	✓	✓
OEM integration	✓	✓	
Plug and play			✓
Multiple laser heads			✓
Red beam alignment			✓
Air cooling			✓
Manual shutter & safety key			✓
User friendly software		✓	✓
Temperature control of QCL chip		✓	✓
MODBUS control		✓	
Software or TTL power modulation		✓	✓
Modulation down to 10ns of pulsewidth		✓	✓

The plug-and-play benchtop turnkey system

The turnkey system is a plug-and-play benchtop system that customers can use for lab development purposes.

A user friendly Windows software controls both the temperature and the current, thus preventing laser damage. The power is easily modulated by software or external TTL signal.

For different projects, the same driver can be connected to one or two laser heads, regardless of wavelength or power. Each laser head is air cooled and can have a red beam laser for alignment purposes.

Benefits:

- Supports high-power lasers and can operate lasers >1W of power
- Fast: can modulate down to 10 nanoseconds of pulsewidth
- Can operate QCW lasers
- Plug-and-play system that takes care of everything (air cooling, driver, temperature management..)
- Keep your driver for future extra laser heads – no need to purchase a new driver
- Red beam laser helps you align your setup

Features

Functionalities	Laser safety, Laser driver (ON/OFF), Laser temperature and TEC control, frequency modulation, duty cycle, external TTL
Physical interface	USB interface for PC connexion (USB cable supplied) TTL trig IN connector for TTL external signal TTL trig OUT connector for synchronisation Option: Extra red laser beam for alignment help (typically 2-3mrad of pointing difference between the red laser beam and the infra-red beam)
Software	A user friendly Windows software is supplied
Input power	24V DC (an AC/DC power transformer is supplied)
Dimension	laser head: 20cm x 15cm x 6cm / driver: 25cm*15cm*6cm
Weight	925 g
Operational temperature	+10°C to +30°C of ambient temperature
Laser head cooling	Air cooled

PowerMir Application note - Describes how you can modulate the power

Turnkey system Software user guide - Describes how you can control the system with the supplied Windows Software

Communication protocol - Describes how you can control the system with Modbus communication over RS485

Turnkey system General User guide - Describes how to generally operate the system

POEM series : HHL-packaged laser + driver OEM modules

This system is made up of a QCL HHL-packaged laser plugged to an OEM PCB driver board. Onboard firmware and Windows software are both provided.

Benefits:

- Generates pulsewidths down to 10ns
- Both external (TTL) and internal modulation with Windows software possible
- Driver includes both temperature and current control and onboard firmware safeguards the laser
- Controllable both with user friendly Windows software supplied or with Modbus communications over RS485
- Several systems can be controlled and synchronized for power combination
- Designed for OEM integration into systems

Features

Functionalities	Laser safety, Laser driver (ON/OFF), Laser temperature and TEC control, frequency modulation, external TTL
Physical interface	USB, RS485
Protocol	MODBUS
Input power	24V DC
Dimension	4.45cm x 11cm x 2.5cm
Weight	190 g (HHL 120g and PCB 70g)
Operational temp.	-20° C to +30° C @ base plate. This working environmental temperature must in any case be above dew point to avoid water condensation

Software and communications

Each system can be controlled by MODBUS over RS485 and several systems can be controlled by one single supervisory computer. Furthermore, a user-friendly Windows software is supplied to allow customers to easily control one or several systems. See software user guide for more details.

One single PC can control several systems

HHL-packaged lasers

The High Heat Load (HHL) package includes the high power laser mounted on a thermoelectric cooler and suitable optics to collimate the beam of the laser.

Benefits:

- Built-in TEC and thermistor for temperature control of the chip
- Built-in collimated lens
- Robust packaging for harsh environments

Features

Packaging	Hermetically sealed with nitrogen gas fill inside a High-Heat Load (HHL) package
Wall-plug efficiency	5 to 10%
Built-in TEC included	$I_{max} = 5.2A$, $V_{max} = 15.7V$
Built-in temperature sensor thermistor	Resistance @ 25°C: 10 kΩ 0/50 °C Beta value: $\beta = 3892 K$
Laser current (typ.)	2 A
Laser voltage	10 to 20 V
Operational temperature	-20 °C to +30 °C @ base plate. This working environmental temperature must in any case be above dew point to avoid water condensation
Weight	120 grams

Drawing - All dimensions are in mm

The above HHL-package diagram shows the built-in thermistor that indicates the laser chip temperature. The diagram also shows the base plate that dissipates the heat (because typically the built-in TEC will cool down the laser chip).
